

REPLACEMENT PUMPS

FOR TOUGH OFFSHORE & MARINE APPLICATIONS

Hamworthy Pumps has more than 100 years experience in design and manufacturing of centrifugal pumps.

Following the success of the renowned Dolphin and Eureka centrifugal pump series, our continued research and development has led to the introduction of a series of pumps to better serve the shipping industry.

Our experience enables us to support owners and operators with replacement pumps and spare parts, assuring them of reduced spare inventory, cost efficiency and reliable operation.

Hamworthy Pumps has an extensive range of centrifugal pumps for replacement purposes, covering capacities between 15m³/h - 6000m³/h at heads of 15m - 150m for seawater and freshwater duties.

For many years Hamworthy Pumps has been supplying pumps to ships and rigs from our extensive stock in Europe and Singapore to satisfy their urgent requirements to replace existing pumps.

We always provide first class technical, spares and services support to our customer wherever they are around the world. In addition, we are well supported by agent representatives in all major shipping locations.

Range of Replacement Pump:

- Model C2G
- Model CG
- Model CA
- Model CB
- Dolphin
- Model CM
- Model SO
- Model AC
- Model R

In addition to standard seawater and freshwater applications for centrifugal pumps, we can also supply replacement pumps for most marine applications including screw, turbine, gear and progressive cavity type pumps.

THE SOLUTION

Hamworthy Pumps are known for their reliability, performance and value for money. As part of Hamworthy's customer focus strategy we have recently launched our 'replacement pump initiative'.

Are you having difficulty in obtaining spare parts for your existing pumps?

Hamworthy Pumps has a new and extensive range of marine pumps, high levels of stock including spare parts, and a global network of sales and services.

Are those spares becoming prohibitively expensive? Would you like to reduce your spares inventory?

Purchasing a new Hamworthy pump as a direct replacement cuts cost through competitive pricing, increase operational simplicity, highest levels of reliability, plus easier and less frequent maintenance.

Are you experiencing repeated failures with your existing pumps due to their age?

Many shipowners and rig operators are replacing their old pumps with our latest range of pumps, designed with minimum number of parts and a high degree of standardisation of components for low spares inventory.

Would you like to change a pump but are deterred by the work required to change the existing installation pipework?

With our know how, and experience, we can engineer and produce a solution which will include the replacement pump, the adaptors and fittings to enable the existing pump to be changed efficiently. Furthermore, we do offer pump installation service as required.
